• AUDIO-FIRST WORKSTATION FOR AUTHORS & PUBLISHERS

# Adung Studio Book

Transforming long-form manuscripts and digital literature into broadcast-quality audiobooks through multi-voice AI acting and natural pacing, powered by ElevenLabs Multilingual V3 Voice AI.

**33,000,000**
CHARACTER RUNWAY TARGET

**44.1 kHz**

**< 0.8s**
COLD-START TIMELINE EDITOR

# The Audiobook Production Bottleneck

Indie authors and digital publishers face an insurmountable barrier between finished manuscripts and commercially viable audiobooks.

**$3,500+**

### Prohibitive Studio Costs

Hiring professional voice actors and audio mastering studios costs between $2,000 and $5,000 per title. Over 92% of self-published indie authors are completely priced out of audiobooks.

**Monotone**

### TTS Voice Fatigue

Conventional Text-to-Speech produces flat, robotic narration with zero dramatic inflection, single-speaker fatigue, and unnatural pauses that fail Audible/ACX quality thresholds.

**$7.9B+**

### Rapidly Growing Market

The global audiobook market is compounding at 26.4% annually. Over 50 million digital listeners consume audiobooks monthly, creating massive demand for high-volume, expressive voice acting.

# The Complete Desktop Authoring Suite

A zero-bloat Windows 64-bit native application designed specifically for long-form narrative production.

## ⚡ Core Editorial Features

- **Multi-Character Casting Matrix:** Assign distinct voice identities to Narrators, Protagonists, and Supporting roles across 20+ chapters with 100% vocal consistency.
- **Natural Micro-Breath Pacing:** Automated sentence tokenization injects human-like micro-pauses (180ms for commas, 680ms for paragraph transitions) avoiding synthetic rush.
- **ACX Broadcast Master Export:** Automatic RMS loudness normalization (-19 to -23 LUFS), true peak limiter (-3dB), and chapter ID3 metadata tagging.
- **Zero-Bloat Standalone Client:** Native WebView2 shell (<15MB installer size), instantaneous cold start, and local SQLite state persistence.

## 🛠️ Workflow Pipeline

### 01. Ingest & Chapter Parsing

Import Markdown, TXT, or DOCX. Parser automatically isolates dialogue quotes from narrator prose.

### 02. Casting & Emotion Assignment

Map character IDs to ElevenLabs voice models with granular stability and style exaggeration sliders.

### 03. Batch Cloud Rendering

Render multi-chapter batches concurrently via ElevenLabs API with real-time waveform inspection.

# Powered by ElevenLabs Voice AI

Why ElevenLabs is the indispensable, non-substitutable voice layer of our product architecture.

## 🎯 Why Only ElevenLabs Fits Our Core Need

- **Authentic Emotional Nuance:** ElevenLabs Multilingual V3 captures whispered suspense, narrative solemnity, and heated dialogue that open-source models cannot replicate.
- **Character Voice Cloning:** Authors can clone their own reading voice or create exclusive custom character signatures across multi-book series.
- **Broadcast Fidelity:** Crystal-clear 44.1 kHz / 192 kbps audio with zero mechanical artifacts ensures effortless passing of Audible & Apple Books QA gates.

## 📈 High-Volume API Consumption Model

- **High Character Density per Project:** An average 5-hour audiobook requires ~350,000 to 500,000 characters. Audiobooks are among the highest API-consuming workloads in existence.
- **Grant Conversion to Paid Runway:** The 33M character grant allows us to onboard 70+ authors during R&D. Upon completion, active authors seamlessly transition into our paid subscription tiers, driving direct ongoing ElevenLabs API revenue.
- **Hybrid Token Optimization:** Real-time local draft previews preserve cloud credits exclusively for finalized, high-value master renders.

# Monetization Model & 12-Month Plan

Sustainable recurring revenue model converting software licensing into long-term cloud voice API consumption.

## $39 / mo

### Creator Pro Tier

Targeted at indie fiction and non-fiction authors. Includes full multi-character casting, batch chapter export, ACX compliance check, and bundled ElevenLabs generation allocation.

## $99 / mo

### Studio Publisher Tier

Targeted at boutique audiobook publishers and podcast networks. Includes multi-seat workstation licenses, custom voice cloning profiles, and high-volume rendering priority.

## 500+

### 12-Month Target Authors

Scaling to 500 active author seats across Vietnam, US, and Southeast Asia. Target annualized API consumption: 150M+ characters, transitioning Adung Studio into an enterprise ElevenLabs customer.
